

CAVALIER

Go further – Get excited – Walk and Talk

Do you search a combined in- and outdoor walker, and do you have better control of the arms than the legs? CAVALIER might be your solution.

CAVALIER is designed with focus on basic mobility at a reasonable walking pace. The Legs generate momentum on the ground while the arms do the steering and your body is stabilized by saddle and body support.

CAVALIER works more precise than a traditional walker with free rotating front forks. Like on a bike, the handlebar connects to the front wheels. Further a spring cylinder helps steering the Cavalier. You have firm control of turning in narrow places as well as in rough terrain.

Get on your feet and go!

Just a little walking makes a big difference to your health and independence – if you are sitting in a wheelchair most of day.

It is good for your heart, lungs, muscles and metabolic systems and also to your mental health, because you are active and meet other people at eye level.

Being standing and at eye level with other people makes getting contact more straight forward.

Head off from your home in a CAVALIER, with exactly the support you need, reducing work load on back, knees and hips. Go on the grass, forest trails or in the city. You might power walk in areas, that before seemed impossible.

Children and youngsters develop their social skills though communicating and interaction with peers. As such a group seldom stands or sits still for long it is crucial to be able to follow the group in- and outdoors.

CAVALIER is used by people with a wide spectrum of problems affecting strength, balance, coordination and movement planning.

CAVALIER Features

- CAVALIER's large wheels and spring assisted handlebar provides great rolling and steering also on rough or soft ground.
- Models from about 3 years to adult.
- If the user walk "tip toe" – then add about 5 cm to leg length to find relevant saddle height.
- Options of different ergonomic multi adjustable saddle and chest support system.
- Longer posts for saddle and body support can be supplied.
- Multi adjustable mountainbike handlebar with brake.
- Rear wheel drum brake.
- Durable & stabile design.
- Easy transfer on & off by use of drop link of saddle section.
- All models, except size 0 have drop link of saddle section.
- Tool bag and manual.
